

Subscriber Intelligence

Mobile Networks contain valuable and monetizable information. JT are enabling a range of business applications utilising mobile network information and mobile operator connectivity. Banking and fraud applications have been early adopters, JT have seen great results in the UK market and now other markets are following this trend. JT integrate a suite of technical components and interfaces and work with a range of participants and partners worldwide to develop this new industry and solution set.

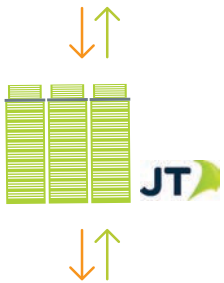

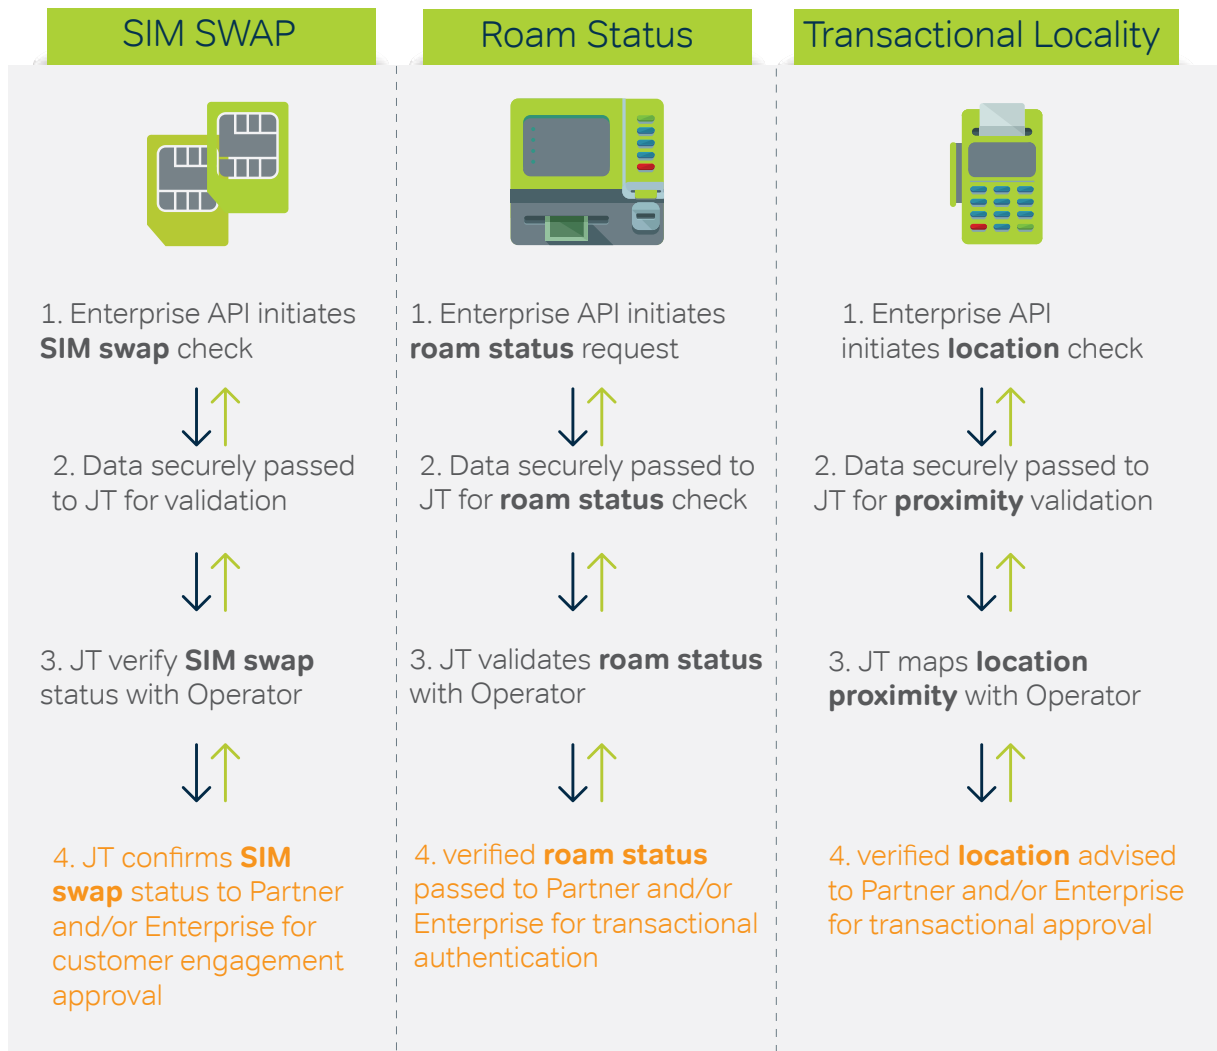

Fraud Management Service

- Enterprise access to trusted customer data in mobile networks
- Operator solution to deliver subscriber data services whilst ensuring data control and network security

JT's service is delivered via APIs
