

JT Cloud Backup

Product Description

JT's Backup solution is based on cloud technology that enables us to support all types of devices on a single platform that achieves high security and encryption certifications. Compatible with most enterprise environments and utilising our agentless architecture, we provide a less resource intensive and disruptive service that delivers backup, recovery, and restore.

Convenient

JT Cloud Backup can be accessed anywhere, anytime provided you have internet connection. Backup can be undertaken automatically and systematically, letting you focus on work, and not worrying about loss of critical business data.

How JT Cloud Backup and recovery can help you:

- Efficient and cost effective solution
- First class service powered by a globally recognised market leader
- Global reach delivered with local expertise
- 24x7x365 live agent monitored support
- Agentless architecture with de-duplication minimises data transmission and storage
- Unrivalled security with data encryption and purpose built storage in resilient backup vaults

Secure

Your data will be securely stored in our own ISO/IEC 27001 certified JT Cloud. Our Data Centres are SOC 2 and 3, ISO/IEC 27001, and PCI-DSS v3.2 certified. These resources mean JT is perfectly equipped to deliver world-class backup solutions for your business.

Data being stored in the cloud means it is not subject to physical threats such as flooding or fires, so your critical business information remains secure and ready for business as usual.

Recovery

JT Cloud Backup means backups are available and easily located should you lose, corrupt or alter data.

Flexibility

The backups can be made across either a direct connection or over the Internet. Depending on your specific data sovereignty or other security requirements, your data can be stored in either Jersey or Guernsey Data Centres. Lastly for extra security the data is replicated onto to additional, separate servers to protect you against a primary backup server fault.

Cost effective

Businesses around the world are enjoying the benefit of Cloud-based backup.

- A modern, flexible solution, aiding productivity through ease of use and access
- Cloud-based backup means no investment in expensive hardware, and no need for ongoing maintenance or troubleshooting
- No transportation or storage of critical data in 'safe' physical locations
