

# Sponsored Roaming (Outbound Solution)

JT's sponsored roaming is an outbound roaming solution connecting you to over 600 direct roaming partners through one single relationship with JT. Our outbound sponsored roaming solution is very simple to implement, and roaming to all 600 partners can be in place in a matter of weeks by us providing the JT IMSI for use alongside the home IMSI using OTA technology.

## Benefits

- Provides highly competitive EU regulated tariffs for roaming
- Offers broad international coverage
- Is seamless to the end user
- Simplifies the management of roaming operations
- Constantly acquires new roaming destinations & roaming revenue

Given the difficulties new operators face implementing roaming, or indeed operators without the time or resources, we have created products that allow other operators to make use of our agreements for both inbound and outbound roaming.
